

# Security

Fedelta's Security module empowers management to enforce integrity into the information recorded at Point of Sale . By tying transaction records to live and recorded video footage you can quickly identify both inaccurate and fraudulent Point of Sale usage.

The ability to account for each and every action on the Point of Sale equips management with the necessary tools to decrease theft and increase employee productivity; effectively increasing the overall bottom dollar

Learn how a security integration can be tailored to your organisational requirements

## Key Features

{slide=Overlay video footage with detailed transaction information}Assigning specific cameras to point of sale terminals provides touch by touch overlay information against video footage. Identifying inaccuracies in ordering on point of sale becomes a simple process. {/slide}{slide=Isolate POS actions for specific search criteria}Simply search for transactions of interest using criteria such as: time periods, transaction type, user accessing system, products ordered, discounts given, and sale\order void status.{/slide}{slide=View information offsite through internet connection}Fedelta-integrated Security Suites offer capabilities over the internet. Security issues can be managed remotely at your convenience.{/slide}
